

Wireless G+ Modem Router

Connect your wired and wireless desktop computers and notebooks to your Belkin Wireless G+ Modem Router to share your broadband Internet access.

Wireless G+ builds upon the widely deployed 802.11g standard by transferring data up to 125 Mbps using the 2.4Ghz band. This means you will see overall speed improvements in "mixed mode" networking environments with other 802.11g devices. Wireless G+ is ideal for homes and offices looking for a performance boost when downloading music from the Internet, sharing photos or gaming online.

Belkin networking offers this one-box solution that lets you share your ADSL Internet connection, files and peripherals without cables. It combines two essential networking functions in one innovative product— an ADSL Modem with a 4-port Wireless Router. Operating at wireless speeds up to 125Mbps, the ADSL Modem with Wireless-G Router operates on the 802.11g wireless Ethernet standard. This standard is backward-compatible, so you can use it in combination with existing 802.11b Wi-Fi networks. Your Modem-Router also features an integrated 4-port 10/100Base-Tx Ethernet switch so you can connect your wired computers easily.
