

N1 Wireless Router

Create a network that offers the best coverage and speed. Quickly and efficiently exchange documents, share resources, and distribute large video and music files throughout your network at a link rate of up to 300Mbps.

N1 Wireless Networking Based on the 802.11n draft, N1 Wireless enables multiple receivers and transmitters to send and receive data through the air, using Intelligent MIMO (Multiple Input Multiple Output) spatial multiplexing techniques. The smart-antenna technology builds upon the widely deployed 802.11g standard by greatly increasing speed, range and faster speeds up to 300Mbps.*

Providing greater range and faster speeds, N1 Wireless offers a quick and efficient way for people to distribute video, music, photos, and files among the networked computers in their home. The built-in Network Status Display shows the status of your network. The icons represent each component of your network and show you whether or not each device is working properly.

*NOTE: The standard transmission rate-150Mbps and 300Mbps - is the physical data rate. Actual data throughput will be lower.

Benefits

- **Share your Internet connection and simultaneously:**

- Stream HD Video
- Listen to digital music
- Play online games
- Transfer photos and home videos
- Shop online and surf the web
- Email and chat
- Handle multiple VoIP phone calls

- **System Requirements:** Broadband Internet connection with RJ45 (Ethernet connection)
