

Wireless G Router

Belkin Wireless G, or 802.11g, refers to the networking standard that transfers data at up to 54 Mbps using the 2.4 GHz band. It is ideal for homes and offices that require a flexible solution to download music from the Internet or share photos and other files without wired connections between computers. Belkin Wireless G is ideal for Web-surfing and email.

With a Wireless G Router as the central connection point for your network, your computers can share files, printers, hard drives and - via a DSL modem - broadband access to Internet. Our advanced security protects your connected computers from unwanted intruders. You can add up to 32 computers to your network with additional desktop and notebook adapters.

Benefits

- Share your Cable broadband wirelessly
