

USB Anywhere - F5U203uk

The USB Anywhere connects two mass-storage devices (media reader, digital camera, hard drive) using USB cables to transfer photos, songs, and files from one device to the other—all without a computer. Use the Belkin USB Anywhere to copy files from your digital camera to your external hard drive, between two MP3 players, and/or between USB flash-memory drives, external hard drives, CD-R burners, and memory-card readers. The compact USB Anywhere is ideal for traveling, as it eliminates the need to use your computer for photo storage. When your digital camera's media card gets full, you can use USB Anywhere to download the images to your portable hard drive and take more pictures.

Product Features:

- Only compatible with FAT32 file system hard drive
- Operates on 3 AAA alkaline batteries
- Transfers files at up to 12Mbps
- Installs with Plug-and-Play and hot swap convenience
