

ExpandView CAT5 Dual Input Remote Module

An ExpandView CAT5 Dual Input Remote Module is required for each Digital Display. Connecting to the Broadcast Module or Line Expander via UTP cabling, the Remote Module is required to provide connectivity via UTP input to a HDB15 output for the remote digital display.

The Dual Input Remote Module provides two video inputs, one from the Broadcast Module or Line Splitter and one from a local computer. If used in a Computer Based Training (CBT) environment, the students' computer can be connected to the HDB15 input, whilst the teacher computer can be connected to the UTP input. This provides the teacher with the ability to send their signal to all students' computers (when showing students' how to use a particular application) or to give the students' their own computer display at the touch of a button.

Benefits

- Provides dual video input for remote and local display applications
- Perfect for digital signage and CBT applications
- Supports high video resolutions of up to 1600x1200@75Hz
- 3-Year Manufacturer's Warranty
- Free Technical Support
